

## Mustang offers the following in its "One Stop" package:

- **Mustang "One Stop" Shop for Repairs, Key Injection and Inventory Control.** We eliminate multiple handling for repairs (in and out of Warranty), or shipment to a separate vendor for Key Injection. This provides "ready" inventory and lower turn around costs.
- **Mustang Eliminates the Mysteries of Key Injection and Debit Security.** *Mustang* is fully trained with an exceptional background in current debit standards. We are equipped to handle all debit terminal security issues. We provide secure Key Injection (DUKPT and Triple-DES Master/Session) and offer our extensive knowledge to assist you as you implement debit. We continue to invest in knowledge, facilities and management to meet all of both today's and tomorrow's challenges.
- **Mustang Makes Inventory Control Standards Easy to Handle.** The new network and PINpad security standards require that retailers keep track of every unit by serial number with all spares under expensive security control, "from original purchase until destruction". *Mustang* has a secure warehouse for debit terminals, and has invested in systems to guarantee accuracy of terminal tracking.

## The "Debit Card" Scoop:

Accepting PIN-based debit cards **SAVES MONEY** and **TIME!** However, there are new factors to consider with PIN-based debit transactions. Since debit cards and associated PINs allow access to consumer bank accounts, card issuers are more concerned about fraud losses and continue to tighten security around the use of debit terminals at the Point of Sale. This means adhering to newer and higher standards while requiring serious security controls of your PINpads and debit terminals.

According to current standards by ANSI and debit networks, the encryption data (keys) that are used to protect the transmission of PINs from the store to the bank networks must be loaded into the terminals using a certified facility, with compliant DUKPT and Triple-DES encryption. PIN-based debit terminals must be tracked by serial number from "the time of manufacture until destruction", and must be kept under dual control when not installed and connected to a POS system. As higher security measures are instituted, retailers will be required to meet very specific guidelines with both their software and hardware systems.

In response to these tightened security standards, *Mustang* offers a "**One Stop**" program for the deployment, support, and protection of debit terminals. Under one agreement with the retailer, *Mustang* manages complete deployment, service replacement, and inventory of your debit terminals, or any combination of these services. *Mustang* is a fully certified facility with extensive knowledge of POS/Debit Transaction Systems, Security Controls and Network Installation Services.

Let **One Stop** take care of business!
